**SMC™ Flex Smart Motor Controller**

## Product Overview

**Bulletin 150 — SMC Flex Smart Motor Controller**

The SMC Flex controller provides microprocessor controlled starting for standard 3-phase squirrel-cage induction or Wye-Delta (6-lead) motors. Seven standard modes of operation are available within a single controller.

- 1...1250 A Range
- Seven Standard Start Modes
- Options Include Pump Control and Braking Control

**Features**

- |  |  |
|--|--|
| <ul style="list-style-type: none"> <li>• Built in SCR Bypass/Run Contactor</li> <li>• Built in Electronic Motor Overload Protection</li> <li>• CT on each Phase</li> <li>• Metering</li> </ul> | <ul style="list-style-type: none"> <li>• DPI Communication</li> <li>• LCD Display</li> <li>• Keypad Programming</li> <li>• Four Programmable Auxiliary Contacts</li> </ul> |
|--|--|

The SMC Flex controller is available for motors rated 1...1250 A; 200...480V AC, 200...600V AC, or 230...690V AC, 50/60 Hz. In addition to motors, the SMC Flex controller can be used to control resistive loads.

- CE Marked (open type) per EMC Directive and Low Voltage Directive
- CCC (108...480 A)

**Modes of Operation**

The SMC Flex controller provides the following modes of operation as Standard:

**Soft Start**

This method covers the most general applications. The motor is given an initial torque setting, which is user adjustable. From the initial torque level, the output voltage to the motor is steplessly increased during the acceleration ramp time, which is user adjustable.

**Selectable Kickstart**

The kickstart feature provides a boost at startup to break away loads that may require a pulse of high torque to get started. It is intended to provide a current pulse, for a selected period of time.

**Current Limit Start**

This method provides current limit start and is used when it is necessary to limit the maximum starting current. The starting current is user adjustable. The current limit starting time is user adjustable.

**Dual Ramp Start**

This starting method is useful on applications with varying loads, starting torque, and start time requirements. Dual Ramp Start offers the user the ability to select between two separate start profiles with separately adjustable ramp times and initial torque settings.

**Full Voltage Start**

This method is used in applications requiring across-the-line starting. The SMC controller performs like a solid-state contactor. Full inrush current and locked-rotor torque are realized. The SMC may be programmed to provide full voltage start in which the output voltage to the motor reaches full voltage in 1/4 second.

**Linear Speed Acceleration**

With this type of acceleration mode, a closed-loop feedback system maintains the motor acceleration at a constant rate. The required feedback signal is provided by a DC tachometer coupled to the motor (tachometer supplied by user 0...5V DC, 4.5V DC = 100% speed). Kickstart is available with this mode.

**Preset Slow Speed**

This method can be used on applications that require a slow speed for positioning material. The Preset Slow Speed can be set for either Low, 7% of base speed, or High, 15% of base speed. Reversing is also possible through programming. Speeds provided during reverse operation are Low, 10% of base speed, or High, 20% of base speed.

**Soft Stop\***

The Soft Stop option can be used in applications requiring an extended stop time. The voltage ramp down time is user adjustable from 0 to 120 seconds. The load will stop when the voltage drops to a point where the load torque is greater than the motor torque.

## Optional Modes of Operation

### Pump Control - Start and Stop\*

This option is used to reduce surges during the starting and stopping of a centrifugal pump by smoothly accelerating and decelerating the motor. The microprocessor analyzes the motor variables and generates commands which control the motor and reduce the possibility of surges occurring in the system. The pump control module also provides a built-in anti-backspin timer.

### Braking Control

#### SMB Smart Motor Braking\*

This option provides motor braking for applications that require the motor to stop faster than a coast to rest. Braking control, with automatic zero speed shut off, is fully integrated into the compact design of the SMC controller. This design facilitates a clean, straight forward installation and eliminates the requirement for additional hardware such as braking contactors, resistors, timers, and speed sensors. The microprocessor based braking system applies braking current to a standard squirrel-cage induction motor. The strength of the braking current is programmable from 150...400% of full-load current.

#### Accu-Stop\*

This option is used in applications requiring controlled position stopping. During stopping, braking torque is applied to the motor until it reaches preset slow speed (7% or 15% of rated speed) and holds the motor at this speed until a stop command is given. Braking torque is then applied until the motor reaches zero speed. Braking current is programmable from 0...400% of full-load current. Slow Speed Current is programmable from 0...450% of full-load current. Slow speed can be programmed for either 7% (low) or 15% (high).

#### Slow Speed with Braking\*

Slow Speed with Braking is used on applications that require slow speed (in the forward direction) for positioning or alignment and also require braking control to stop. Slow speed adjustments are 7% (low) or 15% (high) of rated speed. Slow speed acceleration current is adjustable from 0...450%. Slow speed running current is adjustable from 0...450% of full-load current. Braking current is adjustable from 0...400%.

\* Not intended to be used as an emergency stop. Refer to the applicable standards for emergency stop requirements.

# SMC™ Flex Smart Motor Controller

## Features

---

### Description of Features

#### **Electronic Motor Overload Protection**

The SMC Flex controller incorporates, as standard, electronic motor overload protection. This overload protection is accomplished electronically with an  $Pt$  algorithm.

When coordinated with the proper short circuit protection, overload protection is intended to protect the motor, motor controller, and power wiring against overheating caused by excessive overcurrent. The SMC Flex controller meets applicable requirements as a motor overload protective device.

The controller's overload protection is programmable, providing the user with flexibility. The overload trip class consists of either OFF, 10, 15, 20 or 30 protection. The trip current is programmed by entering the motor full-load current rating, service factor, and selecting the trip class.

Thermal memory is included to accurately model motor operating temperature. Ambient temperature insensitivity is inherent in the electronic design of the overload.

#### **Stall Protection and Jam Detection**

Motors can experience locked-rotor currents and develop high torque levels in the event of a stall or a jam. These conditions can result in winding insulation breakdown or mechanical damage to the connected load. The SMC Flex controller provides both stall protection and jam detection for enhanced motor and system protection. Stall protection allows the user to program a maximum stall protection delay time from 0...10 seconds. The stall protection delay time is in addition to the programmed start time and begins only after the start time has timed out. If the controller senses that the motor is stalled, it will shut down after the delay period has expired. Jam detection allows the user to determine the motor jam detection level as a percentage of the motor's full-load current rating. To prevent nuisance tripping, a jam detection delay time, from 0.0...99.0 seconds, can be programmed. This allows the user to select the time delay required before the SMC Flex controller will trip on a motor jam condition. The motor current must remain above the jam detection level during the delay time. Jam detection is active only after the motor has reached full speed.

#### **Underload Protection**

Utilizing the underload protection of the SMC Flex controller, motor operation can be halted if a drop in current is sensed.

The SMC Flex controller provides an adjustable underload trip setting from 0...99% of the programmed motor full-load current rating with an adjustable trip delay time of 0...99 seconds.

#### **Undervoltage Protection**

The SMC Flex controller's undervoltage protection will halt motor operation if a drop in the incoming line voltage is detected.

The undervoltage trip level is adjustable as a percentage of the programmed line voltage, from 0...99%. To eliminate nuisance trips, a programmable undervoltage trip delay time of 0...99 seconds can also be programmed. The line voltage must remain below the undervoltage trip level during the programmed delay time.

#### **Oversupply Protection**

If a rise in the incoming line voltage is detected, the SMC Flex controller's oversupply protection will halt motor operation.

The oversupply trip level is adjustable as a percentage of the programmed line voltage, from 0...199%. To eliminate nuisance trips, a programmable oversupply trip delay time of 0...99 seconds can also be programmed. The line voltage must remain above the oversupply trip level during the programmed delay time.

#### **Voltage Unbalance Protection**

Voltage unbalance is detected by monitoring the 3-phase supply voltage magnitudes in conjunction with the rotational relationship of the three phases. The controller will halt motor operation when the calculated voltage unbalance reaches the user-programmed trip level.

The voltage unbalance trip level is programmable from 0...25% unbalance.

#### **Excessive Starts Per Hour**

The SMC Flex controller allows the user to program the allowed number of starts per hour (up to 99). This helps eliminate motor stress caused by repeated starting during a short time period.

#### **Metering**

Power monitoring parameters include:

- 3-phase current
- 3-phase voltage
- Power in kW or mW
- Power usage in kWh or mWH
- Power Factor
- Motor thermal capacity usage
- Elapsed time
- •

**Note:** The motor thermal capacity usage allows the user to monitor the amount of overload thermal capacity usage before the SMC Flex controller's built-in electronic overload trips.

#### **Built-in DPI Communication Capabilities**

A serial interface port is provided as standard, which allows connection to a Bulletin 20 Human Interface Module and a variety of Bulletin 20-COMM Communication Modules. This includes Allen-Bradley Remote I/O, DeviceNet, ControlNet, Ethernet, Profibus, Interbus, and RS485-DF1.

#### **LCD Display**

The SMC Flex controller's three-line 16-character backlit LCD display provides parameter identification using clear, informative text. Controller set up can be performed quickly and easily without the use of a reference manual. Parameters are arranged in an organized four-level menu structure for ease of programming and fast access to parameters.

#### **Keypad Programming**

Programming of parameters is accomplished through a five-button keypad on the front of the SMC Flex controller. The five buttons include up and down arrows, an Enter button, a Select button, and an Escape button. The user needs only to enter the correct sequence of keystrokes for programming the SMC Flex controller.

#### **Auxiliary Contacts**

Four fully programmable hard contacts are furnished as standard with the SMC Flex controller:

Aux #1, Aux #2, Aux #3, Aux #4

- N.O./N.C.
- Normal/Up-to-Speed/External Bypass/Fault/Alarm/Network

#### **Network I/O**

The SMC Flex can have up to two (2) inputs and four (4) outputs controlled via a communication network. The output contacts use the auxiliary contacts.

#### **Ground Fault Input**

The SMC Flex can monitor for ground fault conditions. An external core balance current transformer is required for this function. See SMC Flex User Manual for additional information.

#### **Tach Input**

A motor tachometer is required for the Linear Speed Start mode. Please see the Specifications section page 36 for tachometer characteristics.

#### **PTC Input**

A motor PTC input can be monitored by the SMC Flex. In the event of a fault, the SMC Flex will shut down and indicate a motor PTC fault.

\* Controllers rated 108 A and greater are not equipped with line and load terminal lugs. See page 31 for terminal lug kits.

† Motor FLA rating should fall within specified current range for unit to operate properly.

§ These controllers require a separate 100...240V, 50/60 Hz single-phase control source. To add a control circuit transformer to the enclosure, add the appropriate option code to the catalog string.

♣ Separate 120V or 240V single phase is required for fan operation.

> Line and load termination are provided as standard.

\* Controllers rated 108 A and greater are not equipped with line and load terminal lugs. See page 31 for terminal lug kits.

† Motor FLA rating should fall within specified current range for unit to operate properly.

§ These controllers require a separate 100...240V, 50/60 Hz single-phase control source. To add a control circuit transformer to the enclosure, add the appropriate option code to the catalog string.

♣ Separate 120V or 240V single phase is required for fan operation.

► Line and load termination are provided as standard.

\* Controllers rated 108 A and greater are not equipped with line and load terminal lugs. See page 31 for terminal lug kits.

† Motor FLA rating should fall within specified current range for unit to operate properly.

‡ These controllers require a separate 100...240V, 50/60 Hz single-phase control source. To add a control circuit transformer to the enclosure, add the appropriate option code to the catalog string.

⊕ Separate 120V or 240V single phase is required for fan operation.

➤ Line and load termination are provided as standard.

### Accessories

#### Protective Modules\*

Protective modules must not be placed on the load side of a device when using an inside-the-delta connection or with Pump and Braking control.

	Current Rating	Description	Field Modification Cat. No.
	5...85	480V Protective Module	150-F84
	108...1250		150-F84L
	5...85	600V Protective Module	150-F86
	108...1250		150-F86L

\* The same protective module mounts on the line or load side of the SMC-Flex. For applications requiring both line and load side protection, two protective modules must be ordered.

	1250§	2/0...500 MCM AWG	3	3		100-DL860
		4/0...500 MCM AWG	3	3		

Line and Load terminals are provided as standard on enclosed SMCs.

‡ 5...85 A units have box lugs standard. No additional lugs are required.

§ The 1250 A device requires (1) 100-DL630 and (1) 100-DL860 per connection.

‡ When a multi-conductor lug is required, refer to the User Manual for appropriate lug catalog number.

\* Requires a 20-HIM-H10 cable to connect to the SMC-Flex.

## Specifications

Functional Design Specifications		
Standard Features	Installation	Power Wiring Standard squirrel-cage induction motor or a Wye-Delta, six-lead motor. Control Wiring 2- and 3-wire control for a wide variety of applications.
	Setup	Keypad Front keypad and backlit LCD display.
		Software Parameter values can be downloaded to the SMC-Flex Controller with DriveTools programming software and the Cat. No. 20-COMM... DPI communication module.
	Communications One DPI provided for connection to optional human interface and communication modules.	
	Starting and Stopping Modes Soft Start Current Limit Start Dual Ramp Full Voltage Linear Speed Acceleration Preset Slow Speed Soft Stop	
	Protection and Diagnostics Power loss, line fault, voltage unbalance, excessive starts/hour, phase reversal, undervoltage, overvoltage, controller temp, stall, jam, open gate, overload, underload, communication fault.	
	Metering	Amps, volts, kW, kWh, mW, mWH, elapsed time, power factor, motor thermal capacity usage.
	Alarm Contact	Overload, underload, undervoltage, overvoltage, unbalance, jam, stall, and ground fault
	Status Indication	Stopped, starting, stopping, at speed, alarm, and fault.
	Auxiliary Contacts	Four fully programmable contacts as normal/up-to-speed/fault/alarm/network (N.O./N.C.), or external bypass (N.O. only).
Optional Features	Pump Control Helps reduce fluid surges in centrifugal pumping systems during starting and stopping period. Starting time is adjustable from 0...30 seconds. Stopping time is adjustable from 0...120 seconds.	
	Braking Control	SMB Smart Motor Braking Provides motor braking without additional equipment for applications that require the motor to stop quickly. Braking current is adjustable from 0...400% of the motor's full-load current rating.
		Accu-Stop Provides controlled position stopping. During stopping, braking torque is applied to the motor until it reaches preset slow speed (7% or 15% of rated speed) and holds the motor at this speed until a stop command is given. Braking torque is then applied until the motor reaches zero speed. Braking current is programmable from 0...450% of full-load current.
		Slow Speed with Braking Used on applications that require slow speed (in the forward direction) for positioning or alignment and also require braking control to stop.

\* Use this row for 460V -58 and 575V -59.

† Use this row for 460V -59 and 575V -60 and -61.

\* 970...1250 rated devices are only available as Type 1 and require a door-mounted fan, capable of delivering 240 cfm.

# Smart Motor Controllers — SMC™-3

## Overview/Modes of Operation

 <p><b>Bulletin 150 — Smart Motor Controllers — SMC-3 Smart Motor Controller</b></p> <p>The SMC-3 is a compact, simple to use, solid-state motor controller designed to operate 3-phase motors. It features a built-in overload relay and a built-in SCR bypass contactor on all three phases, allowing a smaller footprint than other soft starters on the market. This product is designed for many applications, including compressors, chillers, pumps, conveyors, and crushers. Modes of operation for the controller are as follows:</p> <ul style="list-style-type: none"> <li>• Soft Start</li> <li>• Current Limit Start</li> <li>• Soft Stop</li> <li>• Kick Start</li> </ul> <p>The controllers offer two voltage ranges: 200...480V AC and 200...600V AC. All voltage ranges will operate at either 50 or 60 Hz.</p> <ul style="list-style-type: none"> <li>• 1...480 A Range</li> <li>• Built-In Electronic Motor Overload Protection</li> <li>• Built-In SCR/Run Bypass</li> <li>• Delta Compatibility</li> </ul>	<p><b>Table of Contents</b></p> <table border="0"> <tr><td>Cat. ## Standards Compliance/Approvals

- UL 508
- CSA C22.2 No. 14
- EN/IEC 60947-4-2
- cULus Listed (Open Type) (File No. E96956)
- CE Marked (Open Type) per EMC Directive and Low Voltage Directive

## Modes of Operation

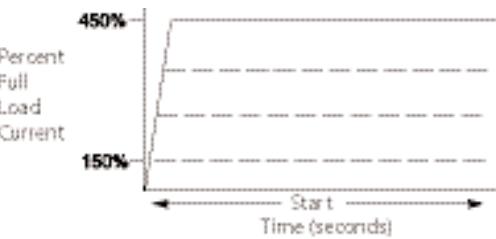

### Soft Start

This method has the most general application. The motor is raised from an initial torque value to full voltage. This initial torque can be adjusted to 0%, 25%, 35%, or 65% of locked rotor torque. The motor voltage is gradually increased during the acceleration ramp time, which can be adjusted from 2, 5, 10, 15, 20, 25, or 30 s.

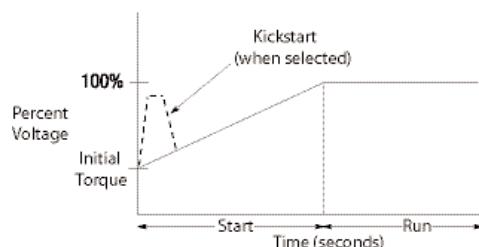

### Current Limit Start

This starting mode is used when it is necessary to limit the maximum starting current. It can be adjusted to 150%, 250%, 350%, or 450% of full load amps. Start times are selectable from 2, 5, 10, 15, 20, 25, or 30 s.

### Selectable Kick Start

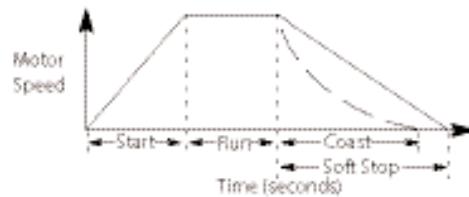

A kickstart, or boost, at the beginning of the start mode is intended to provide a current pulse of 450% of full load current. The kickstart time is adjustable from 0.5...1.5 seconds. This allows the motor to develop additional torque during starting for loads which may need a boost to get initial shaft rotation.

## Modes of Operation, Continued

### Soft Stop

The Soft Stop function can be used with applications that require an extended stop time. When enabled, the voltage ramp down time can be selected to one, two, or three times the starting time. The motor will stop when the motor voltage drops to a point where the load torque is greater than the motor torque.

## Description of Features

### Electronic Motor Overload Protection

The SMC-3 controller incorporates, as standard, electronic motor overload protection. This motor overload protection is accomplished electronically with the use of current transformers on each of the three phases. The controller's overload protection is programmable, providing the user with flexibility. The overload trip class selection consists of either OFF, 10, 15, or 20. The trip current is easily selected by adjusting the rotary potentiometer to the motor full load current rating. Trip reset is selectable to either automatic or manual mode.

**Note:** Trip rating is 120% of dial setting.

### Over-temperature

The SMC-3 monitors the SCR temperature by means of internal thermistors. When the power poles maximum rated temperature is reached, the microcomputer switches off the SMC, a TEMP fault is indicated via LED, and the 97/98 fault contact closes.

### Phase Reversal Protection

When enabled via a DIP switch, 3-phase input power will be verified before starting. If input power phasing is detected to be incorrect, the start will be aborted and a fault indicated.

### Phase Loss/Open Load

The unit will not attempt a start if there is a single-phase condition on the line. This protects from motor burnout during single-phase starting.

### Phase Imbalance

The unit monitors for imbalance between phase currents. To prevent motor damage, the unit will trip if the difference between the minimum phase current and the maximum phase current exceeds 65% for 3 seconds, and a fault will be indicated.

### Shorted SCR

Prior to every start and during starting, the unit will check all SCRs for shorts and unit load connections to the motor. If there is a shorted SCR in the SMC-3 and/or open load, the start will be aborted and a shorted SCR or open load fault will be indicated. This prevents damage from phase imbalance.

### Push to Test

The unit with control wiring can be tested for fault conditions by using the Push to Test function. Hold down the Reset button for 7 seconds to activate the fault Aux (97, 98) and shut down the SMC-3. To clear, either push the Reset button or cycle control power to the device.

### LED Description (Number of Flashes)

1. Overload
2. Overtemperature
3. Phase Reversal
4. Phase Loss/Open Load
5. Phase Imbalance
6. Shorted SCR

\* Motor FLA rating should fall within specified current range for unit to operate properly.

§ These controllers require a separate 100...240V, 50/60 Hz single-phase control source. To add a control circuit transformer to the enclosure, add the appropriate option code to the catalog string.

\* Separate 120V or 240V single phase is required for fan operation.

\* Motor FLA rating should fall within specified current range for unit to operate properly.

§ These controllers require a separate 100...240V, 50/60 Hz single-phase control source. To add a control circuit transformer to the enclosure, add the appropriate option code to the catalog string.

\* Separate 120V or 240V single phase is required for fan operation.

Standard Features							
Selectable Start Times	2, 5, 10, 15, 20, 25, or 30 s						
Selectable Initial Torque	0%, 25%, 35%, and 65% of locked rotor torque						
Selectable Current Limit	150%, 250%, 350%, and 450% of full load current						
Selectable Kick Start — 450% FLA	0, 0.5, 1.0, or 1.5 s						
Selectable Soft Stop	Off, 100%, 200%, or 300% of the start time setting when wired

	Auxiliary Contact Blocks for side mounting with sequence terminal designations	2	0	-CA10	24 34	12	24 12	150-CA20
	1- and 2-pole	0	1	-CA20	11	-CA01	23 11	150-CA01
	Quick and easy mounting without tools				12	-CA11	24 12	150-CA11 (Form C)
	One block per device only	1	1					

## Fans

Description		For Use With	Pkg. Qty.	Cat. No.
 <b>Fan</b> Field installed	Optional	150-C3...37 150-D3...64	1	150-CF64
		150-C43...85/150-D74...147		150-CF147
	Replacement	150-C108, 150-C135		41391-801-03
		150-C201, 150-C251		41391-801-01
		150-C317...C480		41391-801-02

## Connecting Modules

Description		For Use With	Pkg. Qty.	Cat. No.
	<b>Connecting modules to 140-M</b> Electrical interconnection between SMC-Delta/SMC-3 and 140-M. Motor protector and SMC must be mounted separately.	Connects 140-M-C to 150-C3...25/150-D3...25	1	150-CC25
		Connects 140-M-D to 150-C3...25/150-D3...25	1	150-CD25
		Connects 140-M-F to 150-C3...37/150-D3...32	1	150-CF45
	<b>Connecting modules to 100-C</b> Electrical interconnection between SMC-Delta/SMC-3 and 100-C. Contactor and SMC must be mounted separately.	Connects 100-C09...23 to 150-C3...19/150-D3...20	1	150-Cl23
		Connects 100-C30...37 to 150-C3...37/150-D3...32	1	150-Cl37

**Smart Motor Controllers — SMC™-3**

## Accessories, Continued

**Protective Modules**

Protective modules must not be placed on the load side of a device when using an inside-the-delta connection.

Description		For Use With	Pkg. Qty.	Cat. No.
	<b>480V Protective Module</b>	150-C3...37NB or 150-D3...64NB (line only)	1	150-C84
		150-C43...85NB (line and/or load) or 150-D74...147NB (line only)	1	150-C84P
		150-C108...480NB (line and/or load)	1	150-F84L
	<b>600V Protective Module</b>	150-C3...37NC or 150-D3...64NC (line only)	1	150-C86
		150-C43...85NC (line and/or load) or 150-D74...147NC (line only)	1	150-C86P
		150-C108...480NC (line and/or load)	1	150-F86L

**IEC Terminal Covers**

Description		For Use With	Pkg. Qty.	Cat. No.
	<b>Terminal Cover</b> IEC line or load terminal covers for 108...480 A devices. Dead front protection	150-C108...-C135	1	150-TC1
		150-C201...-C251	1	150-TC2
		150-C317...-C480	1	150-TC3

**Terminal Lug Kits (108...1250 A)**

	Current Rating (A) *	Wire Size	Total No. of Line Controller Terminal Lugs Possible Each Side		Pkg. Qty.	Cat. No.
			Line Side	Load Side		
108...135▲	#6...250 MCM AWG 16 mm <sup>2</sup> ...120 mm <sup>2</sup>	3	3	6	3	199-LF1
		6	6			
317...480▲	#4...500 MCM AWG 25 mm <sup>2</sup> ...240 mm <sup>2</sup>	6	6			199-LG1

Line and Load terminals are provided as standard on enclosed SMCs.

\* 1...85 A units have box lugs standard. No additional lugs are required.

▲ When a multi-conductor lug is required, refer to the Instruction Sheet for appropriate lug catalog number.

**Marking Tags and Covers**

Description		For Use With	Pkg. Qty.	Cat. No.
	<b>Marking Tag Sheet</b> 160 perforated paper labels each, 6 x 17 mm To be used with a transparent cover	150-C, 150-D	10	100-FMP
	<b>Transparent Cover</b> To be used with marking tag sheets	150-C, 150-D	100	100-FMC

**Remote Reset Solenoid**

Description		For Use With	Pkg. Qty.	Cat. No.
	<b>Remote Reset Solenoid</b> for remote reset of electronic overload	193-T all, 150-C, 150-D	1	193-ER1⊗

**⊗ Voltage Suffix Code**

**Available Coil Voltages** 12... 600V 50 Hz/12...600V 60 Hz

**Standard Coil Voltages**

Voltage	24	48	110	115	120	220	240
50 Hz	J	—	D	—	—	A	—
60 Hz	J	—	—	—	D	—	A
DC	Z24	Z48	—	Z01	—	—	—

Surcharge for special voltages up to 20 pcs. (no surcharge for quantities greater than 20 pcs.)
