PUMP HANDBOOK

English
50 Hz

Welcome to Grindex Pump handbook!

With this handbook we want to share some of our wide experience in pumping with submersible pumps. You will find an overview of all Grindex pumps with technical details and a pump school, intended to help pump users with common matters in pumping with submersible pumps. The handbook also contains more sophisticated technical information, like pH tables and graphs that show friction losses in pipes and hoses.

We are sure you will find this handbook handy. This handbook is also available for download from our website, www.grindex.com.

If you need more copies, please contact a Grindex representative near you.

INDEX

Drainage pumps

Grindex drainage pumps are designed for professional use in tough applications like mines, construction sites, tunnel sites and other demanding industries.

They are designed for:

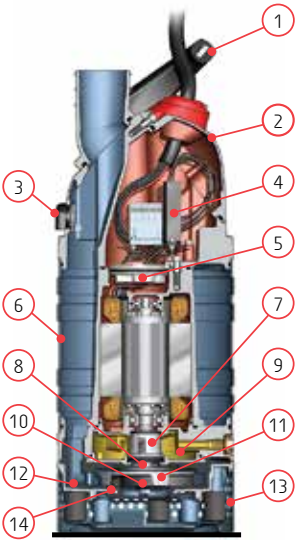
- Pumping water that may contain solids – up to the size of the strainer holes
- Pumping water with abrasive solids
- Pumping ground water
- Pumping raw water
- Pumping spillage water

Grindex drainage pumps are designed for continuous, unattended operation. They have proven their reliability and dependable performance in demanding areas like building and construction, mining, tunnelling, quarries, industries and rental applications.

This page is a "target image" for the "Grindex Cutaway"-app with 3D and Augmented Reality functions

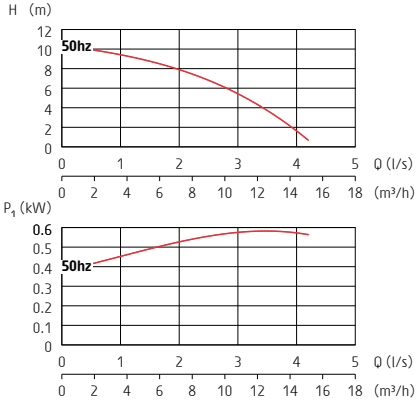
FEATURES

Drainage Pumps



1. Ergonomic handle with a rubber grip on a metal frame
2. Inspection cover with large opening for easy access to junction box
3. Air valve cools the pump when no water is pumped
4. SMART motor protection including phase-failure guard, temperature guard and phase-sequence control eliminating the need for external start box
5. Enhanced terminal board with quick release terminal plate and sealing function
6. Durable outer jacket made from corrugated stainless steel
7. Easy service cartridge seal in rugged metal housing for improved heat transfer and longer pump life
8. Built-in particle repeller carries particles away from the seal for increased pump life
9. Simplified oil inspection and service, thanks to external plugs
10. Single adjustment screw for easy adjustment of the impeller and better performance
11. Hard-Iron™ impeller for maximum durability and performance
12. Heavy-duty polyurethane coating (optional for drainage pumps)
13. Durable strainer in stainless steel with ergonomic grip
14. Wear Protection system for increased life of hydraulic parts

MICRO



Technical Data 50 Hz	Micro
Pump type	8121.211

Sludge pumps

Grindex sludge pumps are designed for professional use in tough applications like mines, construction sites, tunnel sites and other demanding industries.

They are designed for:

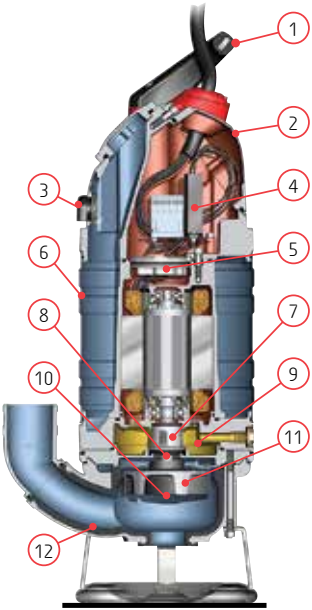
- Pumping water with high content of solids, up to the size of 80 mm.
- Pumping water which contains abrasive particles
- Pumping different types of mud and sludge
- Pumping light slurry

The pumps are designed for continuous, unattended operation. They have proven their reliability and dependable performance in demanding areas like building and construction, mining, tunnelling, quarries, industries, car washes and rental applications.

This page is a "target image" for the "Grindex Cutaway"-app with 3D and Augmented Reality functions

FEATURES

Sludge Pumps



1. Ergonomic handle with a rubber grip on a metal frame
2. Inspection cover with large opening for easy access to junction box
3. Air valve cools the pump when no water is pumped
4. SMART motor protection including phase-failure guard, temperature guard and phase-sequence control eliminating the need for external start box
5. Enhanced terminal board with quick release terminal plate and sealing function
6. Durable outer jacket made from corrugated stainless steel
7. Easy service cartridge seal in rugged metal housing for improved heat transfer and longer pump life
8. Built-in particle repeller carries particles away from the seal for increased pump life
9. Simplified oil inspection and service, thanks to external plugs
10. Single adjustment screw for easy adjustment of the impeller and better performance
11. Hard-Iron™ impeller for maximum durability and performance
12. Heavy-duty polyurethane coating

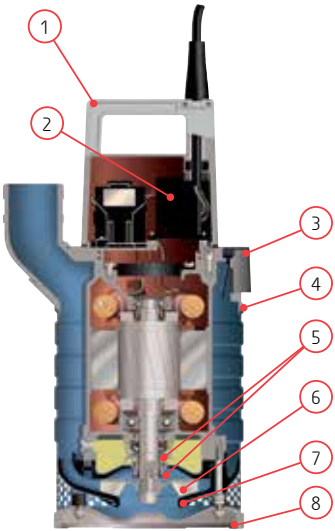
Drainage pumps made of stainless steel, INOX

These pumps are designed to meet the tough requirements from mines, construction sites, landfill sites and other applications that deal with corrosive water. One application is in mines where the water becomes caustic and destroys conventional pumps in matter of days. The pumps may also be used in applications where saltwater is pumped, like shipyards, fish farms, construction works in harbours and offshore projects. All INOX pumps can handle pH values from 2 - 10. They can also be equipped with zinc anodes for extra protection.

FEATURES

Inox Drainage Pumps



1. All steel parts are made of stainless steel
2. SMART motor protection including phase-failure guard, temperature guard, phase-sequence control and plug-&-play eliminating the need for external starter box
3. Air valve cools the pump when the pump is running dry
4. Durable outer casing made from corrugated stainless steel
5. Aquatite INOX - Double mechanical shaft seals with an oil compartment between the seals for longer pump life
6. Stainless steel impeller
7. Rubber lined adjustable diffusers to maintain optimum performance
8. Durable strainer in stainless steel with ergonomic grip

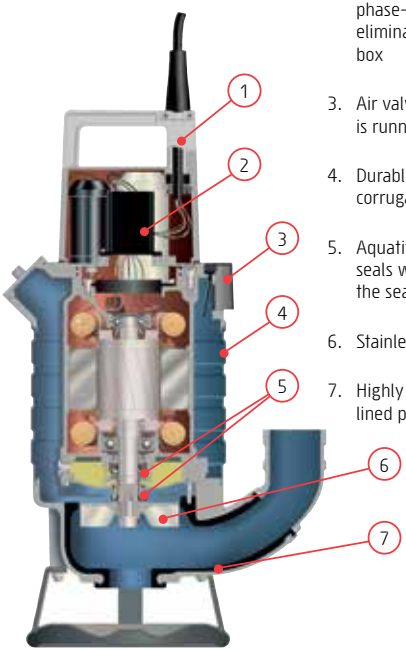
Sludge pumps made of stainless steel, INOX

Our sludge pumps in stainless steel are used for pumping corrosive fluids with solids in harsh environment. The solids can be up to the size of 50 mm. These pumps are designed to meet the tough requirements from mines, construction sites, landfill sites and other applications that deal with corrosive water. One application is in mines where the water becomes caustic and destroys conventional pumps in matter of days. The pumps may also be used in applications where saltwater is pumped, like shipyards, fish farms, construction works in harbours and offshore projects. All INOX pumps can handle pH values from 2 - 10. They can also be equipped with zinc anodes for extra protection.

FEATURES

Inox Sludge Pumps



1. All steel parts are made of stainless steel
2. SMART motor protection including phase-failure guard, temperature guard, phase-sequence control and plug-&-play eliminating the need for external starter box
3. Air valve cools the pump when the pump is running dry
4. Durable outer casing made from corrugated stainless steel
5. Aquatite INOX - Double mechanical shaft seals with an oil compartment between the seals for longer pump life
6. Stainless steel impeller
7. Highly abrasive- and oil-resistant rubber lined pump housing

Slurry pumps, BRAVO

Grindex slurry pumps are designed for use in quarries, mines, dredging, cleaning of settling ponds, other abrasive and other applications and industries that require pumps with very high durability. Each part of the BRAVO pump is designed for maximum endurance and reliability – an absolute must when pumping slurry. All BRAVO pumps can handle liquids with pH values from 5.5 up to 14.

The Bravo 400 to 900 are equipped with agitator beneath the pump intake to stir up settled material toward the pump intake. The Bravo 400 to 900 can also be fitted with an optional cooling jacket for use in dry pit applications.

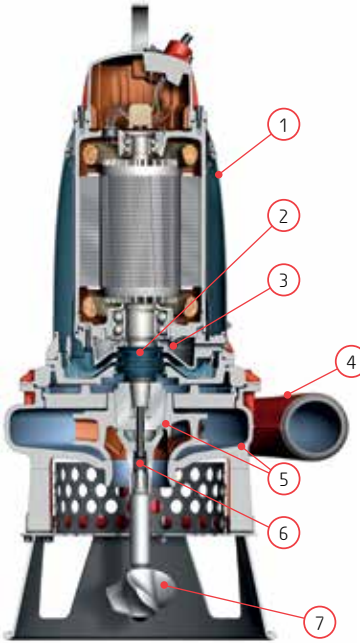
Pumping slurry

Pumping fluids with high solids concentrations is more complicated than pumping water. To avoid sedimentation in the system you need to choose the right pump size and dimensions of hoses and pipes. The concentration of solids together with their size and shape may also affect pump performance and power requirements and therefore pump choice. Remember that settled solids might need external agitators, water jets or mixers to get them back in suspension and allow them to be pumped.

As each application requires its own calculation, we recommend you to contact your Grindex dealer for more information about slurry pumping.

FEATURES

Slurry Pumps



1. Optional cooling jacket for use in dry pit applications
2. Ready to install cartridge seal
3. Leakage sensor
4. Large throughlet handles solids of varying sizes
5. Hard-Iron™ impeller and pump housing for maximum durability and performance
6. Single adjustment sleeve unit for easy adjustment of the impeller
7. Agitator stirs up sand, sludge and solids in suspension

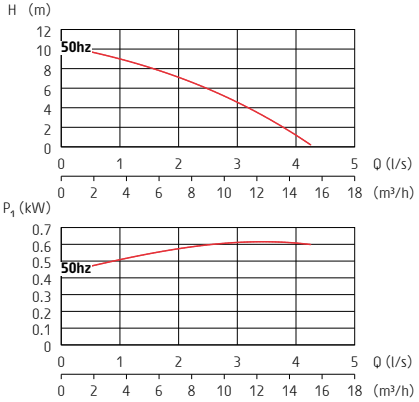
Primo pumps

Grindex Primo is a range of small, handy and affordable pumps, including two drainage and two sludge pumps. The Primo pumps are ideal for construction, industrial and municipal jobs, and the highly compact design allows the Primo pumps to operate in dewatering applications where others don't fit.

PRIMO D4



Technical Data 50 Hz	Primo D4

Grindex Pump School

The school consists of technical articles, intended to help pump users with common matters in pumping with submersible pumps.

Part 1: Choosing the right pump type for the job

A drainage pump is the most commonly used pump type at construction sites. It is used for pumping water with less abrasive solids, like clay. Sand and solids in suspension can also be pumped, up to the size of the strainer holes (normally 7-12 mm). As sand is quite abrasive to the pump, it must not be too concentrated.

Sludge pumps are suitable for pumping water with solids, as well as for pumping sludge. The solids can be up to the size of the pump inlet diameter (normally 32-80 mm).

Pumps made of stainless steel are often used in copper mines, gold mines and other applications with corrosive fluids. An aluminium pump can handle water with pH values from 5-8, while a stainless steel pump can cope with pH values from 2-10.

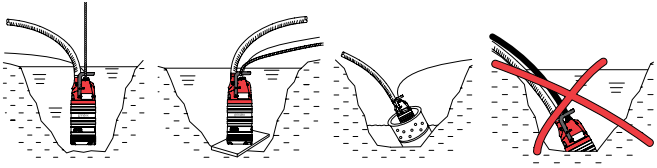
Slurry pumps are designed to handle abrasive solids in suspension, like sand, gravel and concrete, in high concentration. They are also frequently used to move sand in suspension, i.e. at a dredging operation. To cope with the abrasives, the hydraulic parts of a slurry pump are often made of a very hard metal alloy. For improved performance, bigger slurry pumps can be equipped with agitator.

Plug and pump
An electrical submersible pump is easy to use, just plug it in and pump. Several small pumps, placed where the need is for the moment, can pump the water to a dedicated collecting pit through long hoses. As the smaller pumps only weights 10-25 kg, you can carry the pump with you as the works moves to different spots at the site.

In the collection pit, a bigger pump is installed and pumps the water away from the site. By connecting hoses from several pumps to the pit, you can easily dewater a large area with just a few pumps.

Part 2: Pump arrangement

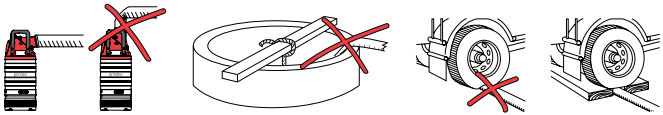
Despite the simplicity, there are a few details to consider for optimizing the pumping:



Arrange the pump so it doesn't burrow itself into sand or clay. This is a common problem at construction sites. It can be avoided quite simple by placing the pump on a bed of coarse gravel or a plank. The pump can also be hung freely by a rope or chain, or put into a cut-down and perforated oil drum.

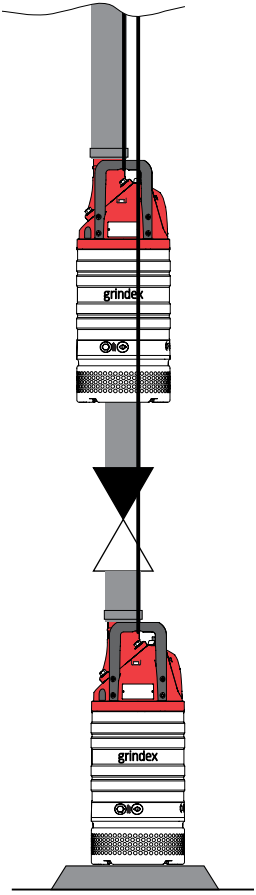
Avoid sharp bend on the hose

As sharp bends, kinks and pinching of the hose are reducing the capacity of the pump, a lot is won by avoiding those circumstances. Turning the pumps discharge connection so the hose doesn't begin with at kink is easily arranged; it can be fitted vertical or horizontal on almost all Grindex pumps.



Tandem connection
In order to achieve higher pumping heads, two or more drainage pumps can be connected in series. For this purpose, a series connecting flange is available as an accessory. It is important that the hoses are equipped with check valves, preventing the pumps from suffering from wear when the water runs back from high heads uncontrolled if a power failure should occur.

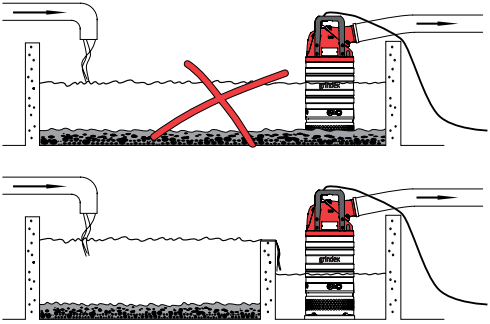
Long distance pumping
Tandem connection of pumps can also be used when the water needs to be pumped a longer distance. A simple arrangement can be pumping the water to a dedicated collection pit. The pit should be equipped with another pump, passing the water on. This technique can also be used for dewatering a greater area with several pumps spread out, pumping the water to a collection pit. The pit is then equipped with a greater pump, that pumps the water away from the site.



Part 3: Sedimentation

The pumped water is often containing solids that cause wear to pumps, valves and other dewatering equipment. This problem is very common in mines and tunnel construction sites. When pumping water that contains solids (like drill cuttings and sand), there is a risk of sedimentation in the system. A typical symptom is pipes and/or hoses that get filled with sediment, resulting in capacity losses. When the amount of solids increases, there is also an increase of wear on the pump.

One way to prevent this is by using sedimentation tanks where the drill cuttings may settle while the rest of the water is pumped away. The tank needs to be as close to the source as possible, ensuring that the solids are pumped as short distance as possible where the solids can settle in peace. To ensure the efficiency of the sedimentation tank, it needs to have as big surface area as possible. The more solids present in the water, the more care should be taken in the design of the sedimentation system.



For applications where solids can not be avoided, there are recommendations for the velocity of the medium in the discharge line:

Mixture	Min. velocity in discharge line
1. Water + coarse gravel	4 m/s (13.1ft/s)
2. Water + gravel	3 m/s (11.5 ft/s)
3. Water + sand	
Sand particles < 0.1 mm (0.004 in)	1.5 m/s (8.2 ft/s)
Sand particles < 0.6 mm (0.024 in)	2.5 m/s (4.9 ft/s)

Limitations for Grindex pumps

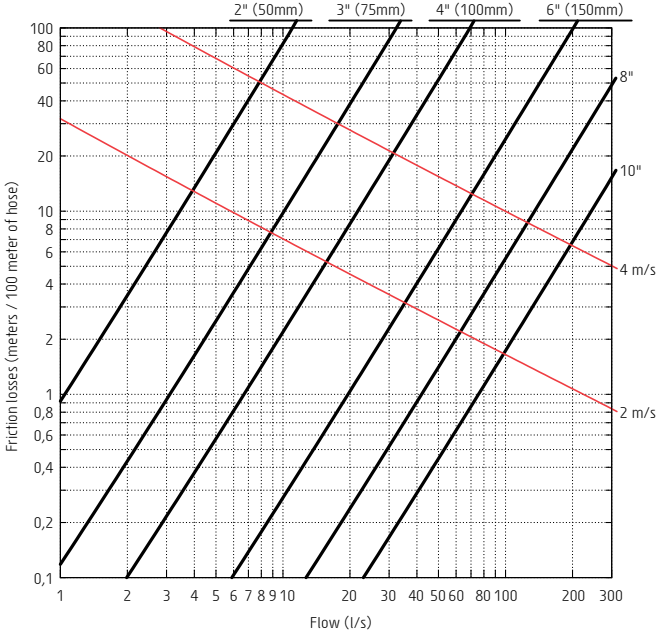
Limitations	Drainage pumps	Sludge pumps
Max. submersion depth (IP68)	20 m (66 ft), except: Micro, Milli & Mini: 10 m (33 ft) Mega: 75 m (246 ft)	20 m (66 ft), except: Solid: (10 m)
Max. liquid temperature *Option: 70°C version**	40°C (104°F) *70°C (158°F)*	40°C (104°F) -
Max. liquid density	1100 kg/m^3 (68 lbs/ft^3)	1100 kg/m^3 (68 lbs/ft^3)
pH of the liquid	5-8 (except Mega: 6-13)	5-8

Limitations	Stainless steel pumps	Slurry pumps
Max. submersion depth (IP68)	20 m (66 ft)	20 m (66 ft)
Max. liquid temperature	40°C (104°F)	40°C (104°F)
Max. liquid density	1100 kg/m^3 (68 lbs/ft^3)	1300-1700 kg/m^3 (80-106 lbs/ft^3)
pH of the liquid	2-10	5.5 - 14

** Option: 70°C version - Drainage pumps:*
Minex, Minette, Minor, Major, Master & Matador

Chart for calculating friction losses in hoses

All pump capacities are measured for clean water, directly at the discharge outlet. When connecting a hose you need to consider the friction losses that come from the size and length of the hose. The chart below shows this.



Formulas for calculating friction losses in hoses and tubes

The chart on page 73 was created using the following formulas:

Friction loss (meters)	Velocity (m/s)	Reynolds number	Friction factor (Swamee & Jain formula)
$H_{friction} = \frac{1000 \times f \times L \times v^2}{2 \times g \times D}$	$V = \frac{1274 \times Q}{D^2}$	$Re = \frac{v \times D}{1000 \times \mu}$	$f = \frac{0.25}{\left[{}^{10}log\left(\frac{\varepsilon}{3.7 \times D} + \frac{5.74}{Re^{0.9}}\right)\right]^2}$
f = friction factor **L** = length (m) **v** = avg. velocity **g** = 9.81 m/s^2 **D** = pipe ∅ (mm)	**Q** = flow (l/s) **D** = pipe ∅ (mm)	**v** = velocity **D** = pipe ∅ (mm) **μ** = viscosity = 1.161 x 10^{-6} m^2/s = 1 cSt	**ε** = roughness factor (mm) **D** = pipe ∅ (mm) **Re** = Reynolds number

Friction factor

Material	Cast iron	Stainless	PVC	HDPE	Concrete	Hose
ε new (mm)	0.25	0.10	0.05	0.05	0.50	0.25
ε used (mm)	1.00	0.25	0.25	0.25	3.00	1.00

Sludge/slurry solids concentration

By volume (C_v)	By mass/weight (C_m)	Mixture
$C_v = \frac{V_{solids}}{V_{solids + water}}$	$C_m = \frac{m_{solids}}{m_{solids + water}}$	$\frac{SV_{mixture}}{SV_{solids}} = \frac{C_v}{C_m}$
$\mathbf{V_{solids}}$ = volume of solids $\mathbf{V_{solids+water}}$ = total sludge volume	$\mathbf{m_{solids}}$ = mass of solids $\mathbf{m_{solids+water}}$ = total sludge mass	**SV** = Specific weight

Minette	1.9 kW	8.4 A	50 m	16 A	5 KVA
Solid	1.2 kW	5.2 A	50 m	10 A	4 KVA
Salvador	1.9 kW	8.4 A	50 m	16 A	5 KVA

**Valid for standard cable sizes*

Note

- In general, delayed fuse shall be dimensioned by rated current x 1.75
- The above given kVA values are meant as guidelines to simplify the choice of generator size.

Regarding size of generator set, each different type has different characteristic; therefore it is always recommended to consult the manufacturer of generator to find out if the actual generator is capable of operating the pump.

Make sure that the cable is sized to allow a voltage drop of max. 5% of the nominal voltage.

Bolt Tightening Torque values

All screws and nuts must be lubricated to achieve correct tightening torque. Screws that are screwed into stainless steel must have the threads coated with suitable lubricants to prevent seizing.

Table 1: Stainless steel, A2 and A4, torque Nm (ft-lbs): Screws and nuts

Property class	M4	M5	M6	M8	M10	M12	M16	M20	M24	M30

9005392 ENG 50Hz. 2017.05

See "Grindex Cutaway", our Augmented Reality interactive 3D app for looking inside a Grindex submersible drainage pump.
Get the app at App Store or Play Store, and use the target image on page 5 in this handbook to see the 3D pump. It's free of course.

GET IT ON Google Play

Download on the App Store
